Manual

The program draws lines, ovals and rectangles on a canvas. It is possible to pick either red, blue or green for the ovals and rectangles. Lines are drawn in black, and each shape has a black border. Click and drag with the mouse to determine the size and position of a shape, and release to draw it.

There are no command-line options for this program, nor are there extra features.

Note that in order for toolbar keyboard shortcuts to work the program should not be run under Ubuntu 14.04 with Qt 5.2 (there is a known bug in Qt).
